

GraphLogic has taken industry-standard tools and created PointDragon™, a uniquely ingenious IDE that fundamentally changes the way software systems are developed. PointDragon is used to build robust, complex, enterprise-scale, internet-ready applications in a fraction of the time required to deploy other solutions. The PointDragon platform unifies application processes, user interfaces, and data repositories. Unifying these into a single database simplifies porting, ensures security, eliminates the headaches of manual integration, and delivers inherent audit & version control. PointDragon's agile development increases productivity and enables ready enhancement & adaptation to ever-changing end-user needs. Applications include: Laboratory Information Management Systems, Microarray Analysis, Project Management...
